TERRAZA GRILL AIRLINE SOLUTIONS

Supplier Excellence Checklist

Cara Airline Solutions supports industry standards that support supply chain efficiencies, including ECCnet Registry, Canada's national product registry. **To list your products with Cara Airline Solutions, your company must adhere to the following business requirements:**

1. Register your Company Prefix Licence or contact GS1 Canada at 1.800.567.7084 ext. 3 to confirm your status. It is also recommended that you provide Cara Airline Solutions with your prefix certificate for their records. If you are not the owner of a Company Prefix Licence yet distribute other manufacturers' products, provide a Prefix Authorization Form to GS1 Canada that allows your organization to use prefixes. Visit www.gs1ca.org/e/prefixlicencing for more information.
2. Ensure that you understand bar code fundamentals. Cara Airline Solutions requires that your products are identified with globally unique bar codes. You may obtain Bar Code Scan Verification Report from GS1 Canada to ensure that the bar codes printed on your case level GTINs (shippers) can be read the first time and every time by scanners. Visit www.gs1ca.org/e/barcoding and www.gs1ca.org/e/bcsv for details.
3. Global Trade Item Numbers (GTINs) are used to identify any trade item or service. Each time that you change your products' graphics, packaging, nutritional information, or declaration to the consumer (among other characteristics), you must assign a new, unique GTIN. Review GS1 Canada's GTIN Allocation Rules – endorsed by Cara Airline Solutions as an enabler of efficient supply chain operations. Visit www.gs1.org/gtinrules to view the GTIN Allocation Rules.
4. Establish a cross-functional team to designate responsibility for ECCnet Registry and other GS1 Canada offerings. Teams should be comprised of a Catalogue Captain responsible for the integrity of the data loaded into ECCnet Registry, as well as sales staff that have access to listing forms.
5. Participate in supplier education webinars to learn how to load your product data into ECCnet Registry. GS1 Canada customizes webinars according to industry, taking under consideration the specific data loading option used. Visit www.gs1ca.org/e/vendoreducation for educational offerings.
6. Prior to product introduction, Cara Airline Solutions requires that you verify the quality and accuracy of your product data and load your product data into ECCnet Registry, according to Canadian Foodservice requirements.

This data includes all levels of the product packaging hierarchy, including required marketing, ingredient and nutritional data attributes. In addition it is critical that full disclosure of allergen information is loaded to ECCnet Registry. For more information and to request certification of your data, contact GS1 Canada Implementation Support at 1.800.567.7084, ext. 341 or ECCnetSupport@gs1ca.org. Go to www.gs1ca.org/e/benefits for additional information.

7. Upon receipt of certification, publish your ECCnet Registry data to all your trading partners.
8. Inform your Cara Airline Solutions Business Manager that your product data is available in ECCnet Registry.

Regularly review your vendor scorecards for any incomplete data. GS1 Canada reviews vendor data for completeness three times a week. The fields identified as missing will be highlighted in your "Vendor Scorecard". Access your vendor scorecards in the tools section of www.mygs1ca.org.

About ECCnet Registry

ECCnet Registry is an online, standardized registry containing detailed product information to allow synchronized and electronic data exchange between trading partners. ECCnet Registry permits suppliers to maintain accurate information of the sold products in one central registry. By integrating ECCnet Registry into your business processes, product information for each product is transferred just once and ECCnet Registry facilitates the distribution of your product data to your many trading partners prior to product listing.

ECCnet Registry is provided according to a cost-recovery model by GS1 Canada, a not-for-profit organization.

Benefits for Operators and Distributors

Foodservice operators and distributors have already realized the significant benefits of using ECCnet Registry to improve supply chain processes for products, such as:

- Access to detailed information (available 24 hours a day, 7 days a week), accompanied by product images;
- Streamlines new product sourcing to meet customer requirements;
- Aligns with Canadian Food Inspection Agency (CFIA) regulations for nutritional data content;
- Streamlines compilation of data content for menu item nutritional information provided to restaurant guests
- Increases sales – products reach the market an average of two weeks faster;
- Improves speed-to-market, enhancing marketing and customer service initiatives;
- Lessens incidences of financial order and invoice discrepancies;
- Reduces out-of-stock occurrences;
- Decreases bar code scanning errors upon receipt of goods;
- Improves logistical data for capacity planning;
- Builds a stronger foundation for collaborative, next-generation initiatives, including Electronic Product Code™/Radio Frequency Identification (EPC/RFID) technology.

Benefits for Suppliers/Vendors

Suppliers/vendors selected ECCnet Registry as their preferred source for both front and back shop product data due to the following benefits:

- Saves time and money by eliminating duplicate processes;
- Enhances supply chain efficiencies by allowing suppliers/vendors to enter their product data only once to create product listings that are available to many customers;
- Ensures data accuracy;
- Improves production forecasts by facilitating the exchange of data on demand;
- Permits faster product introductions, enhancing marketing and customer service initiatives;
- Saves supplier/vendor account management from gathering product information for new item set-ups.
